```
Sequences AAY69576-Y69586 and AAY69598-Y69599 represent peptides that may CC be used to induce anti-IgE (immunoglobulin E) autoantibodies in a dog. CG IgE is an important mediator of canine allergic responses, including Type CC I immediate hypersensitivity. It is estimated that up to 30% of all dogs common the first from allergies or allergy-related skin disorders, and allergic CC dermatitis is thought to affect between 3 and 15% of dogs. Common canine CC allergens include fleas, pollens, moulds and dust, with flea allergy being the most frequent. Once IgE has been released in response to dealergen, the IgE binds to receptors on mast cells. The IgE molecules CC can then become cross-linked, which induces the mast cells or release CC histamine, which leads to the manifestation of allergic symptoms. The peptides of the invention correspond to epitopes of canine IgE, or conservative variations thereof, that are accessible in circulating IgE but not in IgE bound to mast cells. The autoantibodies produced on CC immunisation with such peptides therefore target only circulating IgE, avoiding the possibility that they may cross-link bound IgE molecules, which would exacerbate an ongoing allergic response even in the absence CC symptoms by downregulating IgE production results in an immune response that targets the IgE-expressing B call, which affects IgE symptoms to a dog.

Expression by downregulating IgE production by B cells and/or targetting CC symptoms in a dog.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAB91738

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a modified therapeutic peptide (I) comprising a therapeutically active amino acid region (III) and a comprising a therapeutically active amino acid region (III) and a comprising at the present control of the present in the peptides of a components to form a peptidase stabilised therapeutic peptide composed of a components to form a peptidase stabilised therapeutic peptides e.g. hormones, growth cactors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body. Abdolisying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half intracellular uptake and interference with physiological processes.            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Score

"Isolation, identification and synthesis of novel oviductal motility
"Isolation, head peptide in the Colorado potato beetle, Leptinotarsa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MEDLINE-95060998: pubMed-7970891;
Meule A.G., Shaw C., Bowman J.W.;
"The FMRFamide-like neuropeptide AF2 (Ascaris suum) is present in the free-living nematode, Panagrellus redivivus (Nematoda, Rhabditida).";
Parasitology 109:351-356(1994).

1- FUNCTION: HAS EFFECTS ON MUSCLE TENSION.

1- TISSUE SPECIFICITY: FOUND IN THE NERVE CORDS AND A VARIETY OF GANGLIA PARTICULARLY IN THE ANTERIOR REGIONS.
                                                                                                                                                                                                                                                                                                                                                                                                                           Neuropeptide; Amidation.

glutathione transferase (BC 2.5.1.18) class alpha 5 - pig (fragment)

N;Alternate names: glutathione S-transferase class alpha 5

C:Species: Sus scrofa domestica (domestic pig)

C:Date: 19-Mar-1998 #sequence_revision 17-Apr-1998 #text_change 07-May-1999

C:Accession: S71867

R; Roulini, P:; Anglade, P.; Debrauwer, L.; Tulliez, J.

Biochem. J. 317, 879-884, 1996

A:Title: Characterization of pig liver glutathione S-transferases using HPLC-electrospra

A:Reference number: S71864; MUID:96332484

A:Accession: S71867

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention provides a method for the diagnosis, prevention and creatment of ulcerative colitis (UC) using histone H1-like antigen, a company antigen or a Bacteroides antigen as a target antigen. The novel comethod of diagnosing UC in a subject suspected of having inflammatory company and the sample with a histone H1-like antigen, or perinuclear another company and the histone H1-like antigen, or perinuclear another of the histone H1-like antigen, or the panch reactive fragment, to form a complex of the histone H1-like antigen, or the panch reactive fragment, and antibody to the histone H1-like antigen; and (3) detecting the presence or absence of the complex; where the presence of the complex indicates that the subject has UC. The panch reactive histone H1-like antigen, porin antigen and Bacteroides antigen are useful in the diagnosis, prevention and treatment of UC. The methods can also be used for identifying agents useful for treating UC. Sequences AAY34072-87 complex indicates that the subject has UC. The methods can also be used for identifying agents useful for treating UC. Sequences AAY34072-87 complex indicates the particed from the B. caccae 100 kDa antigen (a microbial panch-reactive protein).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match
The invention provides a method for the diagnosis, prevention and treatment of ulcerative colitis (UC) using histone HI-like antigen, porin antigen or a Bacteroides antigen as a target antigen. The now

The pANCA-reactive histone H1-like antigen are useful in the diagnosis, prevention and treatment of UC. The methods can also be used for identifying agents useful for treating UC. Sequences ANY34072-87 represent peptides derived from the B. caccae 100 kDa antigen (a microbial paNCA-reactive protein).
The invention provides a method for the diagnosis, prevention and treatment of ulcerative colitis (UC) using histone HI-like antigen, a porin antigen or a Bacteroides antigen as a target antigen. The novel method of diagnosing UC in a subject suspected of having inflammatory bowel disease (IBD) comprises: (1) obtaining a sample from the subject; (2) contacting the sample with a histone HI-like antigen, or perinuclear anti-neutrophil cytoplasmic antibody (pANCA)-reactive fragment, to form a complex of the histone HI-like antigen, or the pANCA-reactive fragment, and antibody to the histone HI-like antigen; and (3) detecting the presence or absence of the complex indicates that the subject has UC. The pANCA-reactive histone HI-like antigen, porin antigen and Bacteroides antigen are useful in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ulcerative colliis; histone; H1-like antigen; porin antigen; Bacteroides antigen; inflammatory bowel disease; IBD; pANCA; perinuclear anti-neutrophil cytoplasmic antibody; diagnosis;
